

LaserGasPatroller LGP 900 | 800

Check your pipeline network efficiently:
with the SeCuRi® SAT software system

✓ **EU Methane Regulation**

Locate gas indications and document emissions.

Create LDAR reports easily

Import GIS data and output gas indications, the inspection area, and the checked assets. This allows you to document methane emissions in a legally compliant manner.

Work with maximum efficiency

Thanks to 50 years of experience with vehicle-based systems, we can set the suction capacity to align perfectly with the sensor. This allows you to locate gas indications in your pipe network with just a few repeat rides.

Use the fair price model

You purchase the software license once. The annual maintenance costs are then easily manageable, and you remain in control of your data.

Even more benefits for you:

- + Detect methane – no interference with other gases
- + Perfect for everyday use: suitable for washing facilities thanks to removable wind gauge, easy filter replacement, Bluetooth connection
- + Reduce test gas consumption to a minimum with automatic device check
- + Reduce operating costs thanks to low power consumption – no additional battery for vehicle
- + Trace and record emissions
- + Automated data logging
- + Suspect areas and test area visible
- + Flexibly integrate maps
- + Easily export reports and evidence
- + Easily swap devices to inspect areas that cannot be navigated: seamless cooperation with the EX-TEC® HS 680, VARIOTEC® 480 EX and PORTAFID® devices
- + Ensures seamless, fully automatic recording of all relevant measurement data – from the location to the gas concentration to linking the gas indication to the inspected asset

SeCuRi® SAT software

Example of installation in the vehicle

Simple and clear display

“Using the LaserGasPatroller LGP 800 in our electric vehicles makes us one of the first companies in Austria to be prepared for the requirements of the EU Methane Regulation – while being consistently focussed on sustainability.”

Ferdinand Magditsch, Group leader of gas detection personnel, Wiener Netze (Austrian distribution network operator)

Flexible in any vehicle. Powerful in everyday use.

- + Can be used in virtually any vehicle type – even in electric vehicles
- + The system can be installed by our own vehicle upgrade personnel or by one of our certified contracting parties
- + Wireless connection to tablet or laptop (Windows) via Bluetooth – it doesn't get any easier

Select your system

Feature	LGP 900	LGP 800
Create LDAR report	OGMP 2.0	OGMP 2.0
Resolution	0.01 ppm	0.1 ppm
Wind gauge (anemometer)	✓	Optional
Applications	large-scale identification of suspect areas (approx. 40 m)	inspection area 3-5 m beside the path (with wind gauge) or only on the path (no wind gauge)
Number of passages	1	1
SeCuRi® SAT 7 Documentation creates the finished LDAR report (expected from Q4-2025)	✓	✓
Seamless device replacement within SeCuRi® SAT from LGP to HS 680, VT 480 and PORTAFID®	✓ Integration via SeCuRi® SAT software	✓ Integration via SeCuRi® SAT software
No interference	✓	✓
Measurement system operated via the conventional vehicle power supply network	✓	✓
Accuracy of the satellite positioning	within centimeters	accurate to 2.5 m
Speed during pipe network inspection	approx. 30 km/h	approx. 30 km/h

Do you have questions? Call us.

Are you looking for an efficient solution for pipe network inspection?

The LaserGasPatroller 900/800 is a tool that helps you detect methane leaks efficiently and document them legally. Let's talk. Our service and sales team will gladly help you with the selection. We are there for you when you commission the vehicle as well as afterwards.
